

SERIES 7 & 8

Trunnion Mounted Ball Valves Two-Piece / Three-Piece

delvalflow.com

1-833-DELVAL1

STANDARD FEATURES

Quality & Performance

DelVal Flow Controls provides a wide range of quality products with the reliability you can count on. Our designs are based on industry requirements and our customers' feedback. DelVal Series 7 & 8 trunnion mounted side entry ball valves are manufactured in ISO 9001 certified facilities with a robust quality management system and according to ASME B16.34 and API 6D standards.

Design Construction and Features

1. Valve Body

Heavy duty two-piece (Series 7) or three-piece (Series 8) bolted body construction designed to meet or exceed the requirements of most demanding applications.

2. ISO Top Flange

Top flange is drilled as per ISO 5211 to accommodate direct mounting of a wide range of actuators.

3. Blowout Proof Stem

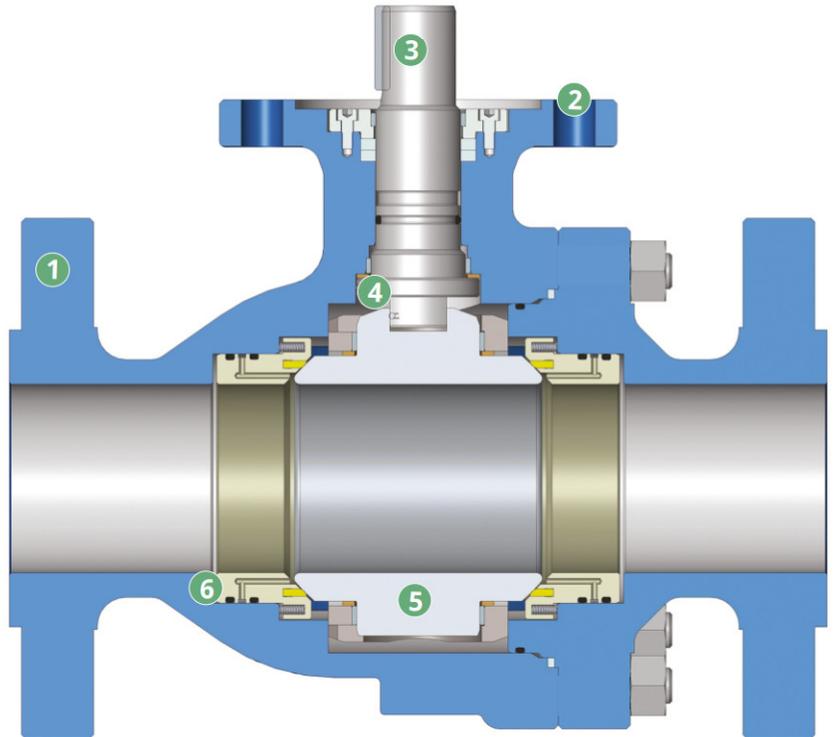

Anti-blowout proof stem provides positive stem retention and permits the replacement of stem packing with the valve in either fully closed or open position.

4. Anti-static Seat Design

All DelVal stems feature anti-static grounding device as standard. This device ensures electrical continuity between valve ball, stem and body, thus eliminating the possibility of static electrical charges creating sparks within the valve.

5. Trunnion Mounted Ball

The ball is held in a fixed axial position by upper and lower trunnions and can move only in a rotational mode.

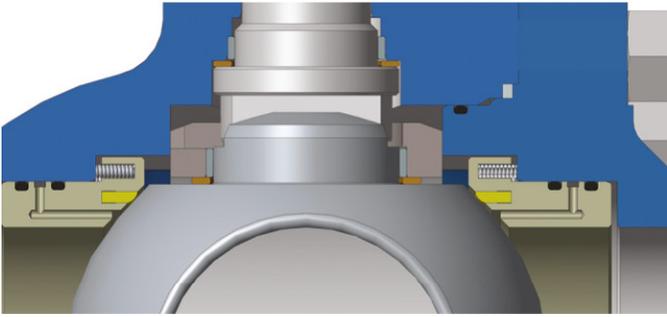

6. Floating Seat Ring

The seats are contained in metal carriers which are spring loaded against ball. Line pressure applied to a close valve increases load on the upstream seat to effect a tight seal. Two independent floating seat rings assures bi-directional tightness of the valve from zero differential pressure to the maximum rated pressure.

7. Self-relieving Seat Design

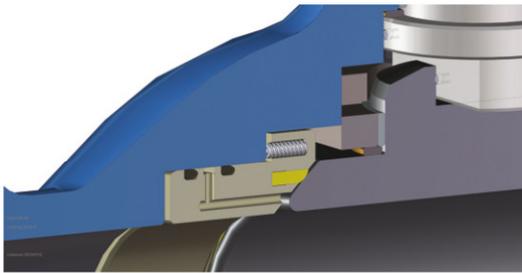

When the valve is in the closed position, media will be trapped in the body cavity. Unless this media is drained, it will be subject to thermal expansion and contraction. As the temperature rises, the trapped media desires to expand and the pressure increases in the body cavity. In order to avoid excessive pressure build-up, the DelVal® valve seats are designed to self-relieve, allowing the media in the body to escape into the pipeline.

DESIGN CONSTRUCTION AND FEATURES

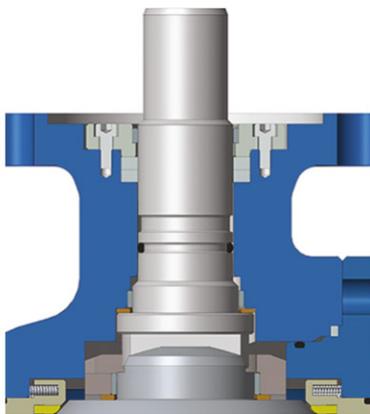

Double Block And Bleed

Spring loaded floating seats maintain contact with the ball and provide a tight shut off even at low pressure differential. Independent sealing of upstream and downstream sides facilitate draining of fluid from body cavity, and thus ensuring double block and bleed operation.

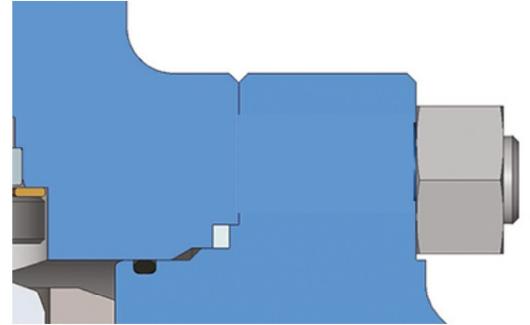

Fire Safe Design

DelVal® fire safe design consists of a primary soft sealing and a secondary metal seat. A resilient material is inserted into the metal seat holder to provide a soft action in addition to the metal sealing between the ball and the seat rings. In case of fire the soft seat insert burns out and allows the spring loaded seat to ensure metal to metal sealing against the ball.

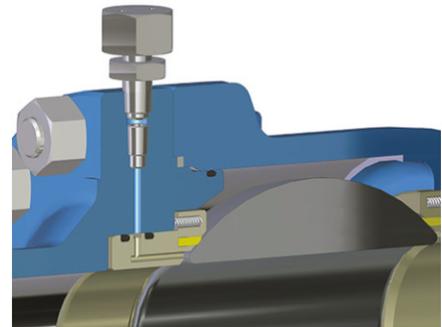

Stem Sealing

A multiple stem sealing arrangement prevents leakage to the atmosphere. The unique arrangement consists of a double sealing arrangement with o-rings around the stem, and two pre-energized graphite seal rings are also provided.

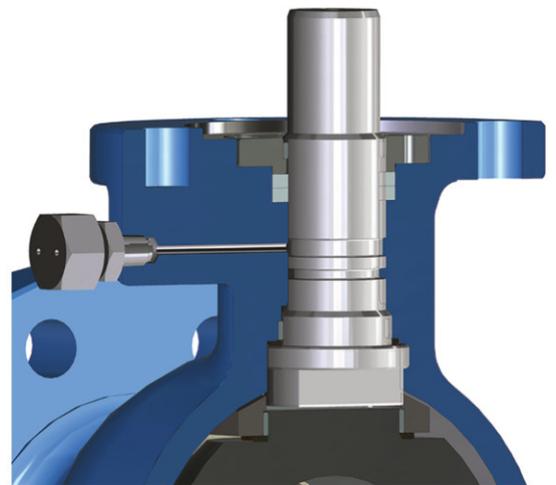

Body Joints

Double seal combination of O-ring and fire safe spiral wound gasket ensures perfect body joint sealing. DelVal® Trunnion Ball Valves meet or exceed the fugitive emission requirements across a wide range of pressure and temperature applications. Valves are suitable for both above and underground installations.

Emergency Seat Sealant Injection

An emergency sealant injection system is available on request. Each DelVal® Trunnion Ball Valve has a port for sealant injection feature.

Emergency Stem Sealant Injection

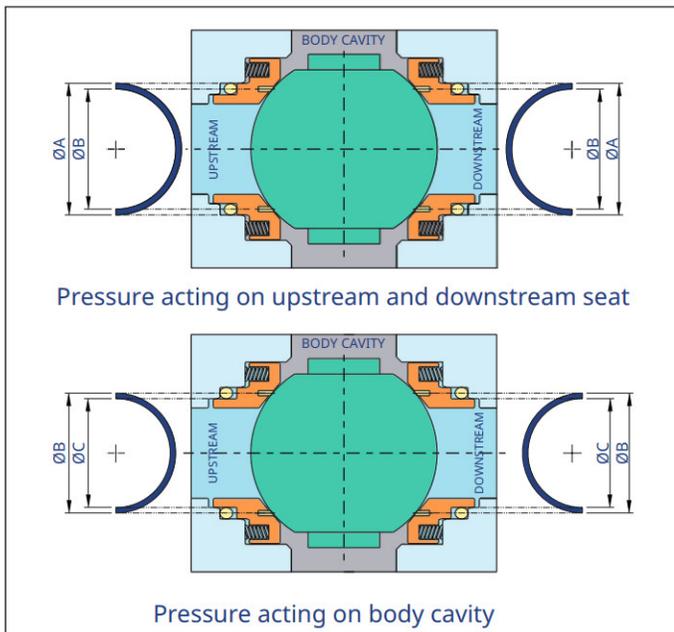

An emergency sealant injection system is available on request. Each DelVal® Trunnion Ball Valve has a

DESIGN CONSTRUCTION AND FEATURES

Double Piston Effect Seats (DIB-1)

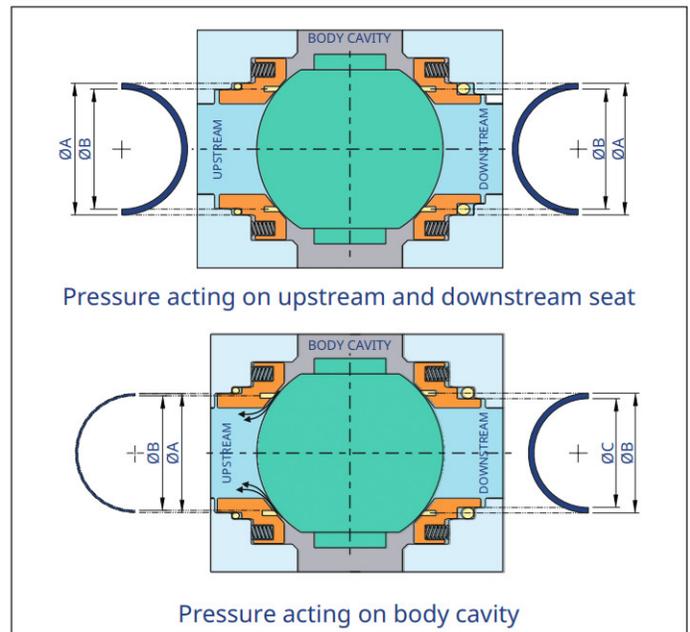

Double piston effect seats are pressure energized in both directions. So the seat rings are always pushed against the ball by the pressure from upstream / downstream or from the cavity.

If the upstream seat fails, the downstream seat can still ensure a tight seal. DPE seats are widely used in specific application (high integrity required) or for pipe pressure testing. Since an external pressure relief valve does not have the self relieving function, the automatic cavity-pressure relief valve shall be provided, unless otherwise specified.

One Self-Relieving Seat and One Double Piston Effect Seat (DIB-2)

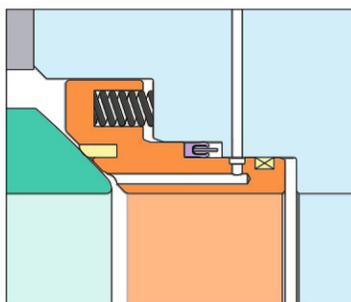

If the force created by the body cavity pressure is greater than the preloaded spring force plus the force created by the pressure from pipeline, the cavity pressure releases via the self-relieving seat, the double piston effect seat still functions a tight seal.

Other Options Available

Lipseal Design

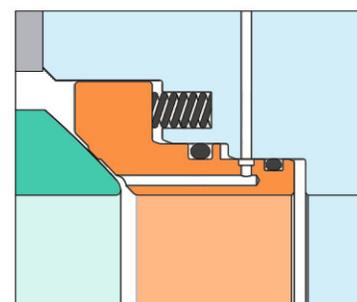

Lipseal is the spring-energized seal utilizing Elgiloy or Inconel spring and PTFE jacket. It is effective in a wide range of applications, when increased corrosion resistance is required such as sour gas service, or for low temperature or cryogenic services.

Lip Seal Design

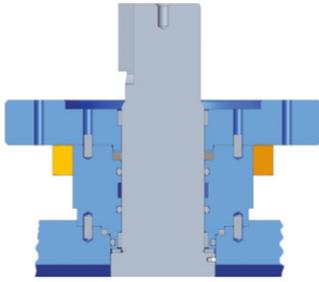

Metal-to-Metal Seat Design

Metal to metal seat is ideal for severe service application. The scraper type seat design prevents build-up of particulate matter on the ball surface ensuring maximum leak tightness.

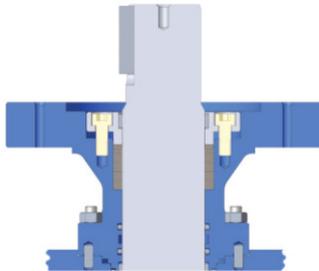

Metal-to-Metal Scraper Seat Design

O-Ring Stem Sealing

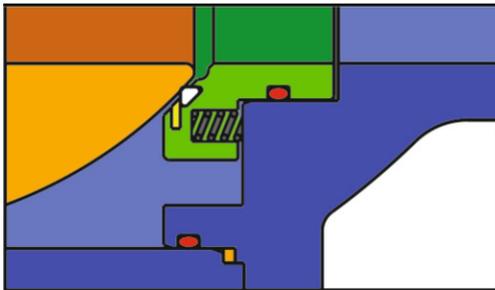

The O-ring seal arrangement features a triple stem seal with two O-rings and a fire safe gasket. Rigorous fugitive emissions testing requirements are reliably met utilizing this O-ring stem seal.

Adjustable Packing Stem Seal

For applications that benefit from the flexibility of a fully adjustable packing gland, this multi stem seal consists of a layered graphite packing gland set and double shaft O-rings. The adjustable seal permits constant adherence to stringent fugitive emissions testing requirements.

Fire Safe, Primary Metal Secondary Soft Seat

Primary metal secondary soft seat has a soft insert (secondary seal) seat which gets compressed fully due to line pressure and the metal seat does the primary sealing. The secondary soft seat give a bubble tight seat sealing, which is not possible in metal seating. These valves are mostly for gas applications.

Standards and Specifications

DelVal Series 7 & 8 Side Entry Ball Valves are designed and manufactured to meet the requirements of the following industry standards:

Design: API 6D, ASME B16.34

Face to Face: API 6D, ASME B16.10

Testing: API 6D, API 598, ISO 5208

Pressure Temperature: ASME B16.34

Flange Accommodation: ASME B16.5, ASME B16.47

Butt Weld Ends: ASME B16.25

NACE: ANSI/ASME MR 0175/ISO 15156-1

Fire Safe Certified: API 6FA / API 607

Fugitive Emission: ISO 15848 - 1 & 2

Compliance: PED 2014/68/EU

Body Style: Flanged end / Butt weld end / Fully welded body

Rating: Class 150 to Class 2500

Temperature Range*: -46°C to 200°C

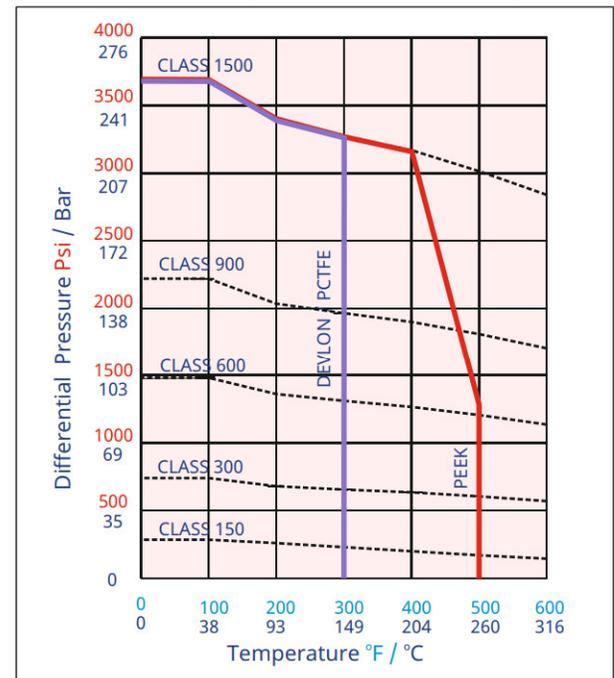

-50°F to 392°F

Size Range:** 2" to 48"

*Pressure temperature rating shall be the lesser of the shell rating or the seat rating or the seal rating.

** Consult DelVal for sizes not available in the bulletin.

Pressure Temperature Ratings

Pressure - temperature seat ratings of valves are as given in the graph for body material ASTM A 216 - Gr. WCB, with the exception of body seat rings and primary soft seals, all valve components are capable of withstanding the pressure-temperature ratings as specified in ASME B 16.34.

Temperature Limits* :

	Material	Lower Limit		Upper Limit	
		Deg.F	Deg.C	Deg.F	Deg.C
Body	WCB	-20	-29	800	425
	LCB	-50	-46	650	345
	CF8	-320	-196	1000	538
	CF8M	-320	-196	1000	538
SEAT	DEVLON®	-58	-50	302	150
	PEEK	-58	-50	500	260
	PCTFE	-320	-196	302	150
SEAL	HNBR AED	-50	-46	302	150
	VITON® AED	5	-15	392	200

Note : These ratings are a guide for general service.

Please consult DelVal® for specific recommendations.

*Pressure temperature rating shall be the lesser of the shell rating or the seat rating or the seal rating.

15	Stud	ASTM A 193 B7M, B8MA / ASTM A 320 L7M			
16	Hex Nut	ASTM A 194 2HM, 8MA, 7M			

*Other materials may be available on request.

** Recommended spares.

Lifting Points and Support:

DN 150/6" and above Class 150, 300, 600, 900.

DN 100/4" and above Class 1500, 2500.

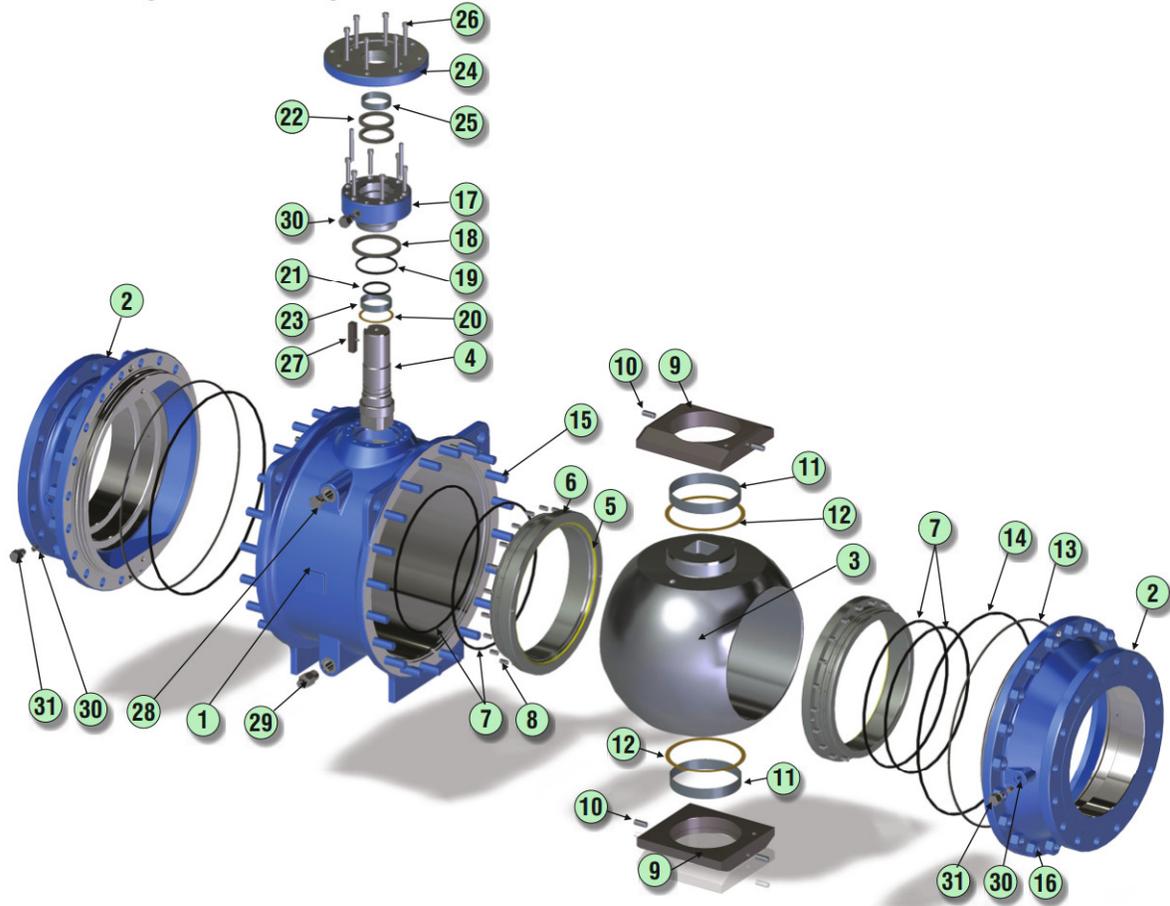

Weld Overlays

Sealing areas and other critical parts of the valve can be weld overlaid in case of corrosive service.

More frequently used materials are SS316L and Alloy 625.

*Applies to 2" reduced port

BTO : Break To Open Torque ETC : End To Close Torque

Note:

- 1) Torque values are primary soft seated valves with seat insert material as Devlon.
- 2) For PEEK seated valves, use sizing factor of 1.5 on above torque values.
- 3) Torque values are at ambient temperature, media being clear water without any factor of safety.
- 4) Above torque values are indicative and for reference only. Actuator sizing torque will depend on service media.
- 5) For reduced port valves, consider torque values corresponding to the lower size e.g. For 12" x 10" reduced port valve consider torque value corresponding to 10".

Operator Information

Lever Operated

Valves up to size 4" Class 150, 2" Class 300 and 600 can be supplied with lever handles for manual operation.

Gear Operated

All valves can be direct mounted with gear operators for manual operation. Gear operators can also be attached with chain-wheel operators to open or close valves located on pipelines at high elevations.

Actuator Operated

All valves can be mounted with pneumatic actuator or electric actuator and accessories for complete on-off automation. Valves can be also mounted with manual overrides.

Special Applications

Sour Service

Trunnion Mounted Ball Valves to be used in "sour gas" service, where there is the risk of stress corrosion due to the presence of wet H₂S, comply with the requirements of ANSI / NACE MR0175 / ISO 15156-2
Hardness tests can be performed as a standard procedure on all parts in contact with the fluid, such as body, connector, ball, stem, seat ring, springs, bolts etc.

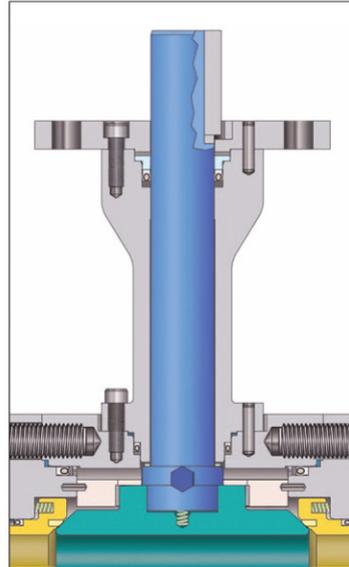

Extended Stem for Low and High Temperature Service

For valves to be used on insulated lines or for valves required for low or high temperature service, designs can include an extended bonnet.

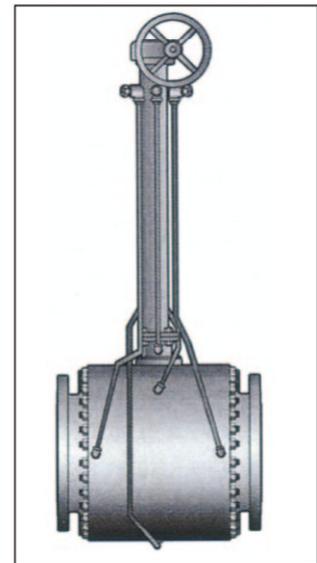

The extended bonnet increases the distance from the body and the stem sealing area, thus avoiding damage to the seals because of temperature.

Extended bonnet is recommended for use at temperatures below -50°C or above 200°C (-58°F or above 392°F).

Low-Temp Extended Bonnet

Extended Stem

Stem for Buried Service

For valves to be installed on underground lines, trunnion mounted ball valves are supplied complete with suitable stem extensions.

All the drain, vent and emergency sealant lines are extended and all relevant pipes are firmly attached to the stem extension.

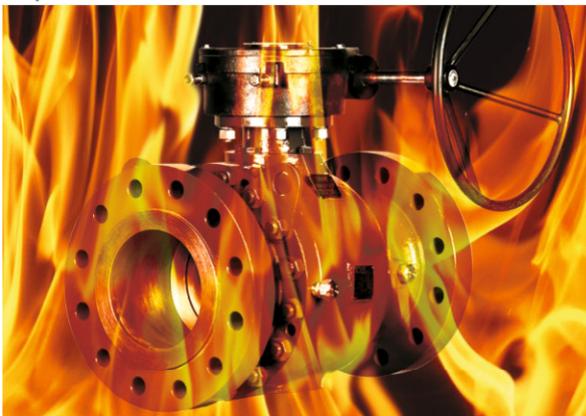

Fully welded body

Welded body designs eliminate body flanges, reducing potential leak paths and increasing resistance to pipeline pressure and stresses. Often used in buried service.

Valves are offered with a) stem extension for buried services and b) pup extension pieces for Butt Weld end valves to avoid damage to valve internals are provided.

Fire Test

Ball valves have been designed to meet the requirements of API 607 / API 6FA.

100% TESTING 100% SERIALIZATION
